

kit includes : bungee pole, 2 top rails, doubler, base unit & carry case

Lean the unit backwards and extend both graphics by pulling up each top rail until the complete image is visible

Remove the three part bungee pole from the base unit
Construct the bungee pole and slot into the base unit

Fit doubler into the top of the bungee pole

Finally secure both graphics into position by locating each top rail hole with the bungee pole doubler
Take care when lowering banners (do not drop) to prevent damage to graphics

Technical Specification

Suitable for graphic thicknesses between 225 & 300 microns
Visible graphic area : 2200mm (H) x 600mm to 1500mm (W)
depending upon version supplied

Unit weight : 8kg approx

Note : Add 200mm to length of graphic to allow for roller
